Лаб №13

Зорилго: Django user model удамшуулан өөрийн вэб апп-д тохирох login болон sign-up хуудас хийж сурах. (үргэлжлэл)

1. Views үүсгэх.

```
### basic_app/views.py код ###
from django.shortcuts import render
from basic_app.forms import UserForm, UserProfileInfoForm

from django.urls import reverse
from django.contrib.auth.decorators import login_required
from django.http import HttpResponseRedirect, HttpResponse
from django.contrib.auth import authenticate, login, logout

# Create your views here.

def index(request):
    return render(request, 'basic_app/index.html')

def register(request):

    registered = False

    if request.method == "POST":
        user_form = UserForm(data=request.POST)
        profile_form = UserProfileInfoForm(data=request.POST)

        if user_form.is_valid() and profile_form.is_valid():
            user = user_form.save()
            user.set_password(user.password)
            user.save()

            profile = profile_form.save(commit=False)
            profile.user = user

            if 'user_pic' in request.FILES:
                profile.user_pic = request.FILES['user_pic']

            profile.save()
```

```
            registered = True
        else:
            print(user_form.errors, profile_form.errors)
    else:
        user_form = UserForm()
        profile_form = UserProfileInfoForm()

    return render(request, 'basic_app/registration.html',
                            {
                                'user_form': user_form,
                                'profile_form': profile_form,
                                'registered': registered
                            })

def user_login(request):
    if request.method == 'POST':
        username = request.POST.get('username')
        password = request.POST.get('password')

        user = authenticate(username=username, password=password)

        if user:
            if user.is_active:
                login(request, user)
                return HttpResponseRedirect(reverse('index'))
            else:
                return HttpResponse('Бүртгэлгүй хэрэглэгч байна.')
        else:
            print("Username: {} and password {}". format(username, password))
            return HttpResponse("invalid login details")

    else:
        return render(request, 'basic_app/login.html', {})

@login_required
def user_logout(request):
    logout(request)
    return HttpResponseRedirect(reverse('index'))

def special(request):
    return HttpResponse('Амжилттай нэвтэрлээ')
```

2. Urls.py үүсгэх.

```
### basic_app/urls.py код ###
from django.urls import path
from basic_app import views

app_name = 'basic_app'

urlpatterns = [
    path('register/', views.register, name='register'),
    path('user_login/', views.user_login, name='user_login'),
]
```

3. Project urls.py.

```
### learning_user/urls.py код ###
from django.contrib import admin
from django.urls import path, include
from basic_app import views
urlpatterns = [
    path('', views.index, name='index'),
    path('admin/', admin.site.urls),
    path('basic_app/', include('basic_app.urls')),
    path('logout/', views.user_logout, name='logout'),
    path('special/', views.special, name='special'),
]
```

Даалгавар:

- Өөрийн сайтын онцлогт тохируулан хэрэглэгчийн мэдээллийг бүртгэж нэвтрэх болон гарах үйлдлүүдийг хийж гүйцэтгэ.

Хэрэглэгчийн хувийн мэдээлэл өөрчлөх хэсгийг хийж гүйцэтгэх.
