Лаб №8

Зорилго:Энгийн html form ашиглан өгөгдлийн санд CRUD үйлдэл хийх.

1. Django-project үүсгэнэ.

```
django-admin startproject <Энд прожект нэр байна>
```

2. Project дотор app үүсгэнэ.

```
Django-admin startapp < Энд апп нэр байна >
```

3. Templates folder үүсгэх тохируулах
4. Model үүсгэх.

movie_app/models.py код

```
from django.db import models

class Branch(models.Model):
    bname = models.CharField(max_length=256)

    def __str__(self):
        return self.bname

class Worker(models.Model):
    wname = models.CharField(max_length=256)
    branch = models.ForeignKey(Branch, on_delete=models.CASCADE)

    def __str__(self):
        return self.wname
```

5. View үүсгэх.

your_app/views.py код

```
from django.shortcuts import render, redirect
import sqlite3 as sql

# Салбарын жагсаалт
def salbar(request):
    con = sql.connect("db.sqlite3")
    con.row_factory = sql.Row
    cur = con.cursor()
    cur.execute(f"SELECT * FROM employee_app_branch")
    row = cur.fetchall()
    con.close()
    context = {'branches': row}
```

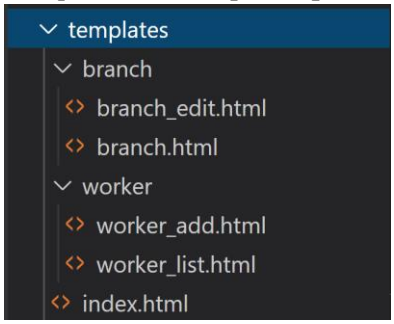
```
    return render(request, "branch/branch.html", context)

# Салбар нэмэх
def salbar_add(request):
    if request.method == 'POST':
        bname = request.POST.get('txtBranch')
        con = sql.connect("db.sqlite3")
        cur = con.cursor()
        cur.execute(f"INSERT INTO employee_app_branch VALUES (NULL, '{bname}')")
        con.commit()
        con.close()
        return redirect('/salbar')

# Салбар засах
def salbar_edit(request, id):
    if request.method == 'GET':
        con = sql.connect("db.sqlite3")
        con.row_factory = sql.Row
        cur = con.cursor()
        cur.execute(f"SELECT * FROM employee_app_branch WHERE id={id}")
        row = cur.fetchall()
        con.close()
        context = {'bname': row[0]['bname']}
        return render(request, "branch/branch_edit.html", context)
    elif request.method == 'POST':
        con = sql.connect("db.sqlite3")
        con.row_factory = sql.Row
        cur = con.cursor()
        bname = request.POST.get('txtBranch')
        cur.execute(f"UPDATE employee_app_branch SET bname='{bname}' WHERE id={id}")
        con.commit()
        con.close()
        return redirect('/salbar')

# Салбар устгах
def salbar_delete(request, id):
    con = sql.connect("db.sqlite3")
    cur = con.cursor()
    cur.execute(f"DELETE FROM employee_app_branch WHERE id={id}")
    con.commit()
    con.close()
    return redirect('/salbar')
```

6. Tempates folder дараах бүтэцтэй байна.



```
### templates/index.html код ###
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">

          </td>
        </tr>
        {% endfor %}
      </table>
    {% else %}
    <p>No branches found!!!</p>
    {% endif %}
    <a href="/">Back</a>
</body>
</html>
```

templates/your_app/branch_edit.html код

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Branch</title>
</head>
<body>
    <h3>Branch Edit</h3>

    <form method="POST" action="">
      {% csrf_token %}
        <input type="text" name='txtBranch' value="{{bname}}">
        <input type="submit" value="Edit Branch">
    </form>
```

```
  </br>
    <a href="/">Back</a>
</body>
</html>
```

Даалгавар:

- Салбар болон ажилтан 2 удирдах 2 тусдаа app үүсгэх
- App тус бүрт model-ууд үүсгэх (Branch model, Worker Model)
- App тус бүрт urls.py үүсгэх app_name тохируулах
- App тус бүрийн нэмэх, засах, устгах, мэдээлэл харуулах хэсэг бүрэн ажиллагаатай байх
